Interdisciplinary partnership CSA studio

ABOUT US

CSA studio carries out design activities in the building field, from single renovations to urban implementation. Our staff is made up of highly qualified experts with collaborators and professional specialists that look after the various phases of planning as well as all the related technical services. The founding members of **CSA studio** believe in the importance of giving space to ideas, and over the years have cultivated an organic approach to design aimed at integrating engineering to architecture, 'art' and 'standard', a concept of space experienced from the inside – be it housing space or urban space – or be it understood as human space in its own context. Furthermore, **CSA studio** rather than adopting a method based on abstract concepts, it applies a process where the needs and demands of the client result in the related design requirements through subsequent checks and follow ups and research of urban planning, technological, economical and aesthetic.

CSA studio is made up of 10 people, the founding members and associates: Large enough to deal with important projects but at the same time small enough to look after every job with specific personalization. **CSA studio**, recognised for its accumulated experience furthermore collaborates with a validated network of external collaborators as further support especially in peak periods, this way guaranteeing constant accurate monitoring of jobs. CSA studio's organizational shape is simple and linear with a traditional horizontal scheme.

CSA studio's work is based on a set of technical skills and expertise acquired by its founding members over time. It carries out/focuses its activities in the following 6 disciplines and possesses specific aptitude and specialization for each one:

- ❖ URBAN PLANNING
- ❖ ARCHITECTURE
- ❖ BUILDING RENOVATION
- ❖ INTERIOR DESIGN
- ❖ CONSTRUCTION ENGINEERING
- ❖ CONSTRUCTION SITE SAFETY
- ❖ URBANIZATION WORKS

The project leader is chosen among the partners according to his/her vocational and professional training. The other partners, associates, and collaborators each one recognised for specific aptitude, skills and competencies, all contribute to the final purpose.

	SERVICES PERFORMED
--	--------------------

SF	Feasibility study
PU	Urban planning
PP	Concept design
PD	Working design
PE	Final design
PG	Tender design
EN	Energy design
VF	Fire protection design
DL	Supervision of works
DS	Structural supervision of works
CS	Safety management
SP	Safety management during the design phase
SE	Safety management during the construction phase
RL	Assumption of the role of responsible for the works
VP	Verification of projects
CC	Check and certification
CO	Consulting and research
RC	Surveys and cadastral services
GP	Contract and supply management
CT	Legal technical advice
ST	Other technical services

DATI DI PROGETTO STRUTTURALE

PROGETTO
L'edificio è stato progettato in modo da essere flessibile e adattabile a diverse funzioni. La struttura è stata progettata in modo da essere modulare e flessibile, con una serie di pilastri e travi che permettono di creare spazi di diverse dimensioni e forme. La copertura è stata progettata in modo da essere leggera e trasparente, con una serie di pannelli in policarbonato che permettono di sfruttare la luce naturale. La facciata è stata progettata in modo da essere moderna e funzionale, con una serie di pannelli in alluminio anodizzato che permettono di creare una superficie liscia e riflettente. L'interno è stato progettato in modo da essere luminoso e arioso, con una serie di pannelli in legno che permettono di creare una superficie calda e accogliente. La struttura è stata progettata in modo da essere sostenibile e rispettosa dell'ambiente, con l'uso di materiali a basso impatto ambientale e l'adozione di soluzioni tecnologiche innovative.
